

Fuji TV Documentary Program

“Memory in the Womb”

Written by: Yuko Igarashi

This is a 10 minutes video from a documentary program titled “[Memories in the Womb](#)” broadcasted on May 27th, 2005 by the Fuji Television Network, Inc.

In this short program, you will find amazing testimonies from five children sharing their clear memories and experiences prior to their birth.

Misaki (4 yrs old) and Takano (3 yrs old) shared their memories and experiences in the womb. Misaki curled up her body to show her posture in a womb. In addition, Misaki not only remembers her time in a womb, but she can also recall at a time of her labor and birth experience. Her mother had to go through a cesarean section at a time of her birth and Misaki shared her feelings and experiences on a camera like this:

"when I had surgery, I was nervous and my heart was beating very fast."

Issui (9 yr old) has a memory of being a sperm and a very detailed description of the early development and his growth process accompanied by his drawings which confirmed by Professor Hiroyuki Mori of Teikyo University that it is a precise description and medically accurate information.

Natsumi (10 yrs old) and Yuya (7 yrs old) both shared their memory of being in a place as angels with wings and describes how “above the clouds” looks like prior to their time in a womb.

The “Prenatal Memory” includes memories and experiences of labor and birth, time in a womb, time of conception, life-between-life, and past life.

Dr. Akira Ikegawa, Ob-GYN doctor and the leading researcher of the Prenatal Memory believes that understanding the concept of Prenatal Memory will dramatically change the relationship between parents and children. When mothers find out about the fact that children choose their best mothers from all around the world, they feel a great connection and love and become positive about raising their children. Also, Dr. Ikegawa recommends having communication even prior to conception to have a natural and strong bond with their unborn babies.

Dr. Ikegawa often adds his thoughts like this:

"Whether you believe the existence of the Prenatal Memory or not, that is not relevant."

He continues saying that If you can open your mind for the possibility and allows hypothesis suggested by Dr. Ikegawa, we may be able to create a harmonious lifestyle among family, society, and the world as a whole.
